

AMENDMENTS TO THE CLAIMS

The following listing of claims replaces all prior versions of claims in the application.

1. (Currently Amended) A method performed by a computer system for providing secondhand article information, comprising:

a usage data collection step in which, when an article has been used, usage data showing the facts relating to the usage of that said article are collected;

a usage history storage step in which the collected usage data are stored as usage history in a data base;

a usage history provision step in which, while said article is being put up for sale as a secondhand article, the usage history of said article stored in said data base, is provided to a customer via a network;

a usage data recollecting step in which when said article is used while said article is being put up for sale as a secondhand article, said usage data are recollected;

a usage data updating step in which the usage history of said article stored in said data base are updated based on the recollected usage data; and

an updated usage history provision step in which while said usage history of said article are updated, the updated usage history of said article stored in said data base, is provided to the customer via the network,

wherein said usage data comprises operation data that shows an amount of work done by said article.

2. (Previously Presented) The method according to claim 1, wherein said usage data collection step includes a step for collecting usage data for said article by communicating with said article from a remote location away from said article.

3. (Original) The method according to claim 1, further comprising:

a service data collection step in which, when said article has been serviced, service data that shows the facts relating to the service of said article are collected;

a service history storage step in which the collected service data are stored as service history in said data base; and

a service history provision step in which, while said article is being put up for sale as a secondhand article, the service history for said article stored in said data base, is provided to a customer via a network.

4. (Original) The method according to claim 1, wherein said usage data collection step, said usage history storage step, and said usage history provision step are conducted simultaneously in parallel so that an article still in use can be put up for sale as a secondhand article.

5. (Cancelled)

6. (Original) The method according to claim 1, wherein said usage data includes photographic data showing actual images of said article.

7. (Original) The method according to any one of claims 1 and 3, further comprising a download step of downloading the usage history or service history for said article, which are stored in said data base, to a terminal used by said customer via a network.

8. (Currently Amended) A method performed by a computer system for providing secondhand article information, comprising:

a current state data collecting step in which, while said article is being put up for sale as a secondhand article, current state data that shows the current state of an article are collected at intervals;

a current state data storage step in which the collected current state data are stored in said data base;

a current state data provision step in which, while said article is being put up for sale as a secondhand article, the current state data for said article stored in said data base, are provided to a customer via a network;

a current state data recollecting step in which, when said article is used while said article is being put up for sale as a secondhand article, said current state of said article are recollected;

a current state data updating step in which the current state data for said article stored in said data base are updated based on the recollected usage data; and

an updated current state data provision step in which, while said current state data for said article are updated, the updated current state data for said article stored in said data base, is

provided to the customer via the network,

wherein said current state data comprises article location and cumulative operating hours of said article.

9. (Previously Presented) The method according to claim 8, wherein said current state data collection step includes a step for collecting current state data for said article by communicating with said article from a remote location away from said article.

10. (Original) The method according to claim 8, further comprising:

a service data collection step in which, when said article has been serviced, service data that shows the facts relating to the service of said article are collected;

a service history storage step in which the collected service data are stored as service history in said data base; and

a service history provision step in which, while said article is being put up for sale as a secondhand article, the service history for said article stored in said data base, is provided to a customer via a network.

11. (Currently Amended) A method performed by a computer system for providing secondhand article information comprising:

a usage data collection step in which, when an article has been used, usage data showing the facts relating to the usage of that said article are collected;

a usage history storage step in which the collected usage data are stored as usage history in a data base;

a current state data collecting step in which, while said article is being put up for sale as a secondhand article, current state data that shows the current state of said article are collected at intervals;

a current state data storage step in which the collected current state data are stored in said data base;

a current state data provision step in which, while said article is being put up for sale as a secondhand article, the current state data for said article stored in said data base, is provided to a customer via a network;

a usage history provision step in which, while said article is being put up for sale as a secondhand article, the usage history of said article stored in said data base, is provided to a customer via a network;

a usage data recollecting step in which, when said article is used while said article is being put up for sale as a secondhand article, said usage data are recollected;

a usage data updating step in which the usage history of said article stored in said data base are updated based on the recollected usage data;

an updated usage history provision step in which, while said usage history of said article are updated, the updated usage history of said article stored in said data base, is provided to the customer via the network;

a current state data recollecting step in which when said article is used while said article

is being put up for sale as a secondhand article, said current state of said article are recollected;

a current state data updating step in which the current state data for said article stored in said data base are updated based on the recollected usage data; and

an updated current state data provision step in which, while said current state data for said article are updated, the updated current state data for said article stored in said data base is provided to the customer via the network,

wherein said usage data comprises operation data that shows an amount of work done by said article, and

wherein said current state data comprises article location and cumulative operating hours of said article.

12. (Original) The method according to claim 11, wherein said usage data collection step or current state data collection step includes a step for collecting usage data or current state data for said article by communicating with said article from a remote location away from said article.

13. (Original) The method according to claim 11, further comprising:

a service data collection step in which, when said article has been serviced, service data that shows the facts relating to the service of said article are collected;

a service history storage step in which the collected service data are stored as service history in said data base; and

a service history provision step in which, while said article is being put up for sale as a

secondhand article, the service history for said article stored in said data base, is provided to a customer via a network.

14. (Original) The method according to claim 11, wherein said usage data collection step, said usage history storage step, and said usage history provision step are conducted simultaneously in parallel so that an article still in use can be put up for sale as a secondhand article.

15. (Original) The method according to claim 11, further comprising a step of updating said current state data within said data base based on collected said usage data.

16. (Cancelled)

17. (Original) The method according to claim 11, wherein said usage data includes photographic data showing actual images of said article.

18. (Original) The method according to any one of claims 11 and 13, further comprising a download step of downloading the usage history or service history for said article, which are stored in said data base, to a terminal used by said customer via a network.

19. (Currently Amended) A computer system for providing information about secondhand

articles, comprising:

usage data collection means that, when said article has been used, collects usage data that shows the facts relating the usage of the article;

a data base;

usage history storage means that stores the collected usage data as usage history on said data base;

usage history provision means that, while said article is being put up for sale as a secondhand article, provides the usage history for said article stored in said data base, to a customer via a network; and

usage data updating means that updates the usage history of said article stored on said data base based on the collected usage data; wherein,

said usage data collecting means recollects said usage data of said article when said article is used while said article is being put up for sale as a secondhand article;

said usage data updating means updates the usage history of said article stored in said data base; and

said usage history provision means provides the customer via the network with the updated usage history of said article stored in said data base,

wherein said usage data comprises operation data that shows an amount of work done by said article.

20. (Previously Presented) The system according to claim 19, further comprising:

Amendment
Serial No. 10/051,048
Attorney Docket No. 020011

service data collection means that, when said article has been serviced, collects service data that shows the facts relating to the service of the article;

service history storage means that stores the collected service data as service history on said data base; and

service history provision means that, while said article is being put up for sale as a secondhand article, provides the service history for said article stored in said data base, to a customer via a network.
